## Features

1. The specialty of this machine is designed by big opening diameter, high work efficiency, and capable of processing massive materials.
2. Suitable greatly for the big buckets of 30 or 50 gallons. It can crush materials directly without cutting them into parts in favor of saving labor force and work efficiency.
3. Special cutter design, with removable rotating blades easy to be dismantled.
4. Being made of superior steel material, it has double-ply in sound insulation, and is steady and durable.
5. With the cooling water device, it has the excellent performance in heat dissipation. With the supporting of roller bearing axle, it has the steadiest supporting force.
